EXPERIENCE

Senior Full Stack Developer (.NET Core, Angular, Blazor)

Horizon

2024 - Present Riyadh, Saudi Arabia

- Led .NET and Angular application delivery for a multi-module platform, strengthening architecture for scalability, maintainability, and code quality.
- Strengthened backend reliability by building and maintaining C#, ASP.NET Core, and .NET Framework services that supported POS-related workflows in production.
- Engineered secure, scalable RESTful APIs in .NET Core following Clean Architecture principles, with strong validation and error handling across core modules in an energy-efficiency platform.
- Improved delivery quality through debugging, troubleshooting, code reviews, technical guidance, and support for Agile/Scrum and CI/CD workflows.
- Collaborated with cross-functional teams during sprint planning and retrospectives to translate business requirements into technical architecture and deliver solutions aligned with operational goals.
- Mentored teammates while applying .NET Framework, C#, ASP.NET Core, and Blazor expertise to deliver enterprise features with a strong focus on performance and reliability, and participated in CI/CD workflows using Azure DevOps.

Full Stack / Backend Developer (.NET Core)

Itlink

01/2022 - 01/2024 Cairo, Egypt

- Delivered a parking reservation platform using .NET Core with modern frontend components, supporting a smoother booking and management experience.
- Architected and maintained secure, scalable RESTful APIs using .NET Core, applying CQRS, MediatR, Repository Pattern, Unit of Work, and dependency injection to improve maintainability.
- Orchestrated booking, availability, and payment workflows and implemented OAuth 2.0 / JWT authentication with role-based and policy-based access control for secure, reliable platform operations.
- Enhanced application reliability and performance through efficient coding practices, debugging, and ongoing backend optimization.
- Collaborated with cross-functional stakeholders to translate requirements into features aligned with product and business goals.
- Supported Agile delivery through sprint planning, retrospectives, code reviews, and continuous improvement of development practices.

Full Stack Developer (Angular, .NET Core)

Code Ware

01/2021 - 01/2022 Cairo, Egypt

- Delivered a scalable full-stack parking reservation system using Angular 17+ and .NET Core, applying Reactive Forms, custom validators, RxJS, lazy loading, modular architecture, and SCSS.
- Created secure REST APIs to manage bookings, user data, and real-time parking availability, supported by EF Core code-first development, migrations, indexes, and constraints.
- Collaborated with cross-functional teams to improve performance, usability, and overall system reliability.

SUMMARY

Senior Full Stack Developer with 5+ years of experience in full-stack web development and Agile methodology participation, expert in .NET Core and Angular frameworks. My key achievements include spearheading the delivery of a secure, scalable multi-module platform that improved application reliability and performance by over 30%, and architecting robust RESTful APIs that enhanced system usability and response times. Seeking a Senior Full-Stack Developer position at Agree, where I bring my full-stack development and Agile skills to support your mission of delivering exceptional digital products and experiences.

KEY ACHIEVEMENTS

Relational Database Optimization

Optimized relational databases, improving query performance by 30% and enhancing application responsiveness.

Accelerated Service Integrations

Built RESTful APIs that increased service integration speed by 40%, improving cross-system connectivity and reducing delivery friction.

Backend Performance Enhancement

Reduced backend response times by 25%, enhancing user experience in various applications through optimization.

LANGUAGES

Arabic

Native

EDUCATION

Bachelor's Degree in Computer Science

Minia University

09/2017 - 06/2021 Minia, Egypt

PROJECTS

Saudi Center for Energy Efficiency

https://eess.seec.gov.sa

- Built and maintained a government web application using .NET Core and Blazor, enabling integration with multiple government agencies and improving cross-platform data exchange and service delivery.

General Authority for Real Estate (REGA)

Full-stack and backend solutions for real estate and operational platforms with a focus on reliability, performance, and secure data exchange.

- Improved data reliability and application performance by optimizing REST APIs and database queries for more stable transactions and smoother system behavior.
- Resolved backend bottlenecks through caching, performance tuning, and targeted optimization to improve responsiveness and stability.
- Delivered backend and full-stack solutions that supported real-time notifications, dependable system communication, and stable business workflows.
- Enhanced security and production readiness for high-traffic environments, strengthening reliability, scalability, and resilience.
- Crafted REST APIs to support secure, efficient data exchange across core business logic and payment workflows.

Vision Integration Project

Full-stack and integration-focused delivery across Angular, .NET Core, and secure API architecture for operational platforms.

- Led full-stack delivery using Angular and .NET Core, shaping scalable architecture and maintainable solutions for complex operational needs.
- Engineered robust .NET Core backend systems that integrated with vision processing systems and strengthened POS-related workflows.
- Architected secure REST APIs that enabled reliable integration across an energy-efficiency platform.
- Built responsive Angular frontends that improved user experience and usability.
- Improved application performance by enforcing code quality, applying best practices, and tuning systems for high-traffic workloads.
- Partnered with cross-functional teams to gather requirements and deliver software aligned with business and operational objectives.
- Supported Agile execution through sprint planning, code reviews, and CI/CD practices.

SKILLS

Core Technologies

C#	ASP.NET Core	.NET Core
Angular 17+	Blazor	REST APIs
SQL Server	CQRS	MediatR
Clean Architecture		
Onion Architecture		
Repository Pattern		Unit of Work
OAuth 2.0	JWT Authentication	
Policy-Based Access Control		
Angular Reactive Forms		
Custom Validators		RxJS
Lazy Loading	SCSS	
Modular Architecture		
Dependency Injection		
EF Core Code-First		
EF Core Migrations		
Indexes & Constraints		Query Tuning
Middleware		Debugging
Troubleshooting		React
		ASP MVC
RDBMS	HTML	CSS
		Git
Integration Testing		Azure
		AWS
End-To-End Testing		Code Review
Vue.js	Critical Thinking	
Interpersonal Skills		

PROJECTS

Parking Reservation System

Parking platform for booking, payments, notifications, and backend services.

- Engineered a parking reservation application with a .NET Core backend, designing REST APIs for reservations, availability checks, and payment processing.
- Delivered a full-stack parking reservation system using .NET Core and modern frontend components, supporting reliable booking workflows and improved usability.
- Created REST APIs to manage reservations, parking availability, and payment workflows with secure, maintainable backend logic.
- Enabled real-time notifications for booking confirmations and reminders, improving responsiveness and the overall booking experience.
- Refined frontend interaction and notification flows to support timely confirmations, reminders, and a smoother booking experience.
